This new company wants to sequence your genome and let you share it on a blockchain

People will be able to earn cryptocurrency in exchange for letting pharma companies use their data.

by Emily Mullin February 7, 2018

Cryptocurrency in exchange for your genetic data! Sounds a bit like a scam, but it's the premise behind a new company founded by a leading geneticist. Nebula Genomics says it plans to sequence your genome for under \$1,000, give you insights about it, secure it using a blockchain, and allow you to do whatever you want with the data.

Nebula is the brainchild of geneticist **George Church**, PhD student Dennis Grishin, and graduate Kamal Obbad, all from Harvard. Mirza Cifric, CEO of Veritas Genetics, which offers **a genome-sequencing service for \$999**, is a founding advisor.

The São Paulo Research Foundation - FAPESP

Fapesp: São Paulo Research Foundation

- Mission: support research in all fields
- All proposals are peer reviewed (21,000 proposals in 2012)
- Funded (1962) by the State of São Paulo with 1% of all state revenues
- Annual budget: US\$ 530 M in 2012

Some of FAPESP's main programs

- **12,000 Fellowships (SI, Training, MSc, Dr, PostDoc,)**
- **Research grants**
 - 17 Centers for Research, Innovation and Diffusion (CEPID) - 11 years funding
 - 312 Young Investigator Awards – 4 years funding
 - 419 Thematic Research Projects – 5 years funding
 - 3,983 Regular Research Grants – 2 years funding
- **Special Programs**
 - Biota: Virtual Institute for Biodiversity
 - BIOEN: Bioenergy Research
 - PFGCC: Global Climate Change Research
 - Neurosciences: Epillepsy (using imaging)
 - IT and Advanced Internet
 - Large, multiuser research instruments
- **Application oriented research**
 - Joint University – Industry (PITE)
 - Small bussiness research (PIPE)

FAPESP: Basic Science Focus

- In the World and in Brazil there is in an “utilitarian” view about Science
 - Science that makes business more competitive
 - Science that heals the sick
 - Science that makes the poor rich
- In addition, FAPESP also values a not so “utilitarian” item
 - Science that makes mankind wiser
 - In all fields there are fundamental questions
 - Philosophy, Archeology, Literature, High Energy Physics, Cosmic Rays, Astronomy, Evolution,..

SECRETARIA DE ESTADO DO MEIO AMBIENTE

GABINETE DO SECRETÁRIO

PUBLICADA EM 14/03/88 – SEÇÃO I – PÁG. 36

RESOLUÇÃO SMA-15 DE 13 DE MARÇO DE 2008.

Dispõe sobre os critérios e parâmetros para concessão de autorização para supressão de vegetação nativa considerando as áreas prioritárias para incremento da conectividade.

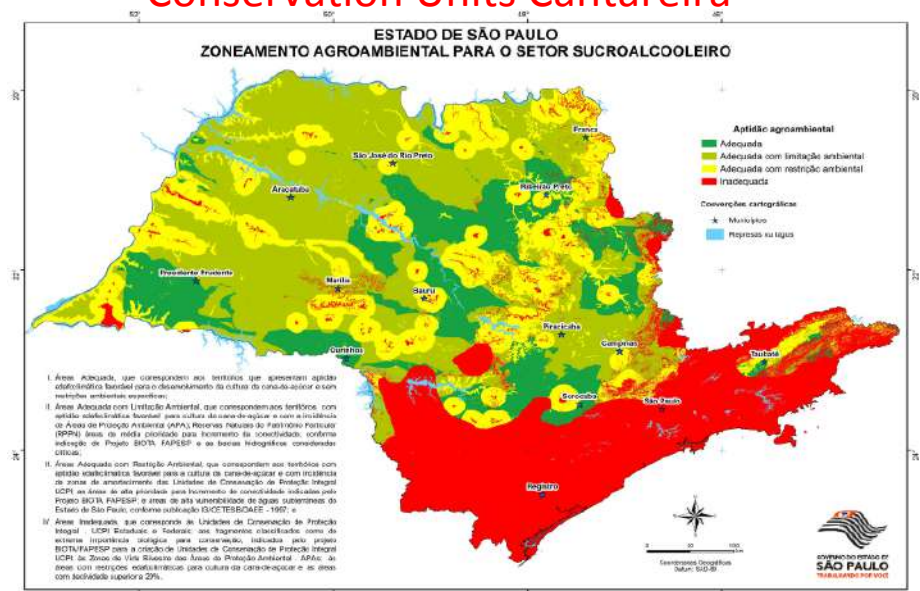

O **SECRETÁRIO DE ESTADO DO MEIO AMBIENTE**, em cumprimento ao disposto nos artigos 23, VII, e 225, § 1º, I, da Constituição Federal, nos artigos 191 e 193 da Constituição do Estado, nos artigos 2º e 4º da Lei federal nº 6.938, de 31 de agosto de 1981, e nos artigos 2º, 4º e 7º da Lei estadual nº 9.509, de 20 de março de 1997, e

Considerando os resultados obtidos pela equipe de pesquisadores do Projeto Biota FAPESP e as informações presentes no mapa de "Áreas prioritárias para incremento da conectividade" e "Áreas prioritárias para criação de Unidades de Conservação" resultantes do Projeto Biota FAPESP;

FAPESP AND INTEL CALL FOR PROPOSALS (CFP)

1. INTRODUCTION

FAPESP and INTEL publish this Call for Proposals and invite interested researchers, working within public or private Higher Education or Research Institutions in the State of São Paulo, to submit projects under the cooperation agreement between FAPESP and INTEL, under the terms and conditions hereinafter set forth.

2. SUBJECT

Academic research on side-channel resistant security for system-on-a-chip (SoC) devices.

3. OVERVIEW

FAPESP and Intel's corporate University Research Office (URO) invite proposals from researchers in the State of São Paulo in Brazil on side-channel resistant security for lightweight Internet of Things (IoT) devices. IoT devices are expected to proliferate significantly in the coming years and pose unique challenges due to limited hardware resources, energy constraints, cost limitations, low bandwidth, and physical exposure to attackers. Unlimited access to IoT devices, in particular, creates opportunities for attackers to exploit side-channel information in order to obtain cryptographic keys, access-controlled data, or other types of protected information. Intel requests proposals for non-incremental research leading to compelling techniques and technologies that will make future lightweight IoT devices significantly more secure against side channel attacks than the current state-of-the-art.

4. BACKGROUND

System-on-a-Chip (SoC) based devices are expected to proliferate significantly in the coming years. One well-known source projects the total number of Internet connected devices globally to reach 25 billion by 2015 and 50 billion by 2020.¹ Dramatic increases in SoC-based device technologies will continue to be seen in such fields as

- Consumer electronics (digital cameras, media players, GPS devices, gaming)
- Mobile communications (smart phones, feature phones, cellular base stations)
- Health and medicine (diagnostic equipment, patient monitoring devices, medical imaging)
- Transportation (vehicle control systems, traffic monitoring and regulation)
- Energy (smart meters, climate sensors, energy management systems)

FAPESP announces call for eScience program

FAPESP announce a call for research proposals for the new Research Program on eScience.

The call for research proposals is open to interested researchers associated to non-profit teaching and research institutions in the State of São Paulo. The main goal is to identify, select and broaden world-class, basic and applied research associated to the relevant topics described in the call.

Relevant topics for this call for research proposals are as follows. However, the call for proposals is not restricted to these topics and additional issues that fit in any eScience area are welcome.

- eScience algorithms and models
 - Mathematical models
 - Data-oriented approaches
 - Digital repositories and data management
 - Extreme scale approaches
- Cyberinfrastructure to support eScience
 - Novel hardware
 - Novel uses of cyberinfrastructure
 - Software, services, protocols, and research tools
- eScience target domains, including:
 - Agricultural Sciences

Proposals can be submitted electronically until April 28th, 2014

R\$ 98 milhões para pesquisas sobre a internet

19/12/2013

Rodrigo Garcia, Raupp, Lafer, Paulo Bernardo e Meirelles, durante a cerimônia de assinatura do convênio para apoiar projetos sobre aplicações-chave, engenharia e tecnologia e fundamentos científicos (foto: Eduardo Cesar)

Agência FAPESP – O Ministério das Comunicações, o Ministério da Ciência, Tecnologia e Inovação e a FAPESP firmaram um convênio de cooperação no valor de R\$ 98 milhões para apoiar projetos de pesquisa científica e tecnológica que contribuam para o desenvolvimento da internet no Brasil.

A assinatura do convênio, ocorrida na quarta-feira (18/12) na sede da FAPESP, contou com a presença dos ministros Marco Antônio Raupp (Ciência, Tecnologia e Inovação) e Paulo Bernardo (Comunicações); de Rodrigo Garcia, secretário de Desenvolvimento,

WELCOME TO ANSP

The ANSP project (*an Academic Network at São Paulo*), as determined by a decision of FAPESP's Board of Trustees, "provides the State of São Paulo research community with state of the art computer networking connectivity."

ANSP develops and maintains the infrastructure, Internet services and data communication in general which, in conjunction with ANSP's Technical Reserve Program, offers the education and research community in the State of São Paulo the technological means needed to access information throughout the world, to share knowledge, to develop collaborative projects and for innovation on a large scale.

The ANSP Project is run by NARA from The Medical School of the University of São Paulo and is funded by FAPESP through process 2013/11711-5

Plano de Gestão de Dados - FAPESP

Gestão de Dados

A FAPESP reconhece a importância da gestão adequada dos dados de pesquisa como parte essencial das boas práticas de pesquisa. Para tanto, considera necessário que os dados resultantes de projetos financiados pela Fundação sejam gerenciados e compartilhados de forma a garantir o maior benefício possível para o avanço científico e tecnológico.

Documentos e páginas de interesse - Planos de Gestão de Dados

Planos de Gestão de Dados vêm sendo exigidos há mais de uma década pelas principais agências governamentais ou privadas de fomento à pesquisa na América do Norte, Europa e Austrália. Esta página apresenta alguns endereços da rede onde podem ser consultados manuais, exemplos de planos e diretivas para redigi-los, para as

Educação

Engenharia

Gerenciar e armazenar grandes volumes de dados gerados em pesquisas são desafios enfrentados por cientistas em todos os campos do conhecimento. Na última década, algumas das principais agências de fomento, como a National Science Foundation (NSF) nos Estados Unidos e o Economic and Social Research Council do Reino Unido, passaram a exigir que os pesquisadores submetam, junto com as solicitações de financiamento, os chamados planos de gestão de dados, que descrevem como os dados produzidos serão gerenciados, preservados e divulgados em repositórios públicos. O objetivo é promover o compartilhamento de

Organização de um plano em cinco etapas

a) Descrição dos dados e metadados produzidos pelo projeto - por exemplo, amostras, registros de coleta, formulários, modelos, resultados experimentais, software, gráficos, mapas, vídeos, planilhas, gravações de áudio, bancos de dados, material didático e outros.

b) Quando aplicável, restrições legais ou éticas para compartilhamento de tais dados, políticas para garantir a privacidade, confidencialidade, segurança, propriedade intelectual e outros.

c) Política de preservação e compartilhamento (por exemplo, compartilhamento imediato ou apenas após a aceitação da publicação associada). Período de carência (antes do compartilhamento) e período durante o qual os dados serão preservados e disponibilizados.

d) Descrição de mecanismos, formatos e padrões para armazenar tais itens de forma a torná-los acessíveis por terceiros. Esta descrição pode incluir o uso de repositórios e serviços de outras instituições.
